The Town of Westfield Assures Residents That Water Services Will Remain without Restrictions this Summer

The Westfield Public Works Department (WPWD) announced today that there will be no irrigation restrictions for any Westfield-Washington Township Service Area Customers at this time. This announcement is in response to the dozens of calls to the WPWD Customer Service Center from area residents inquiring about water restrictions in the Indianapolis Metropolitan area.

During the recent dry conditions and hot weather, WPWD has experienced pumpages in excess of 7 million gallons per day. However, WPWD has infrastructure in place with the capability to safely produce just short of 10 million gallons per day. Because of those statistics, Town officials do not foresee a water shortage in the near future.

“Westfield Public Works services over 8,000 customers and we want our residents to feel safe knowing that during extreme weather conditions, their water and sanitary services will be sufficient,” says Public Works Director Bruce A. Hauk. “Because of our infrastructure and pumping capacities, we feel confident that water restrictions will not have to be mandated in our jurisdiction, which includes Washington Township and a portion of Noblesville Township.” To date, the WPWD maximum water system delivery (pumpage) was approximately 7.5 million gallons per day and that was on July 2, 2004.

The Town of Westfield takes great pride in the services that they provide and the Town will continue to inform their customers about all services and any possible restrictions that may arise. For additional information about the water and sanitary services that the Town of Westfield provides, contact the WPWD Customer Service Center at 317-867-1116.
